|--|---------|---|------------|
| <p>observe that the terms appear to alternate between odd and even numbers. Explain informally why the numbers will continue to alternate in this way.</p> | | <ul style="list-style-type: none"> • Describe the pattern. How are the numbers in the Output increasing with the Input numbers? <i>Possible answers: each output number is 4 more than the last; output numbers that appear are all the even numbers that aren't multiples of 4 (starting with 6); the output number is 2 more than 4 times the input number. Also, adding one input to the following input yields half the first output.</i> RULE: the output number is 2 more than 4 times the input number • Q1: What is the 100th entry in the table? How do you know? You can't be sure, because the pattern is not completely specified, but it is likely that the 100th number is 402. This follows the rule listed above - that the output number is 2 more than 4 times the input number. <p>Activity 3: “Recipe” to perform on a number</p> <ol style="list-style-type: none"> 1. Pick a number 2. Triple your number 3. Subtract 2 from the answer 4. Double the answer 5. Add 6 6. Subtract twice your original number. <ul style="list-style-type: none"> • Q2. What does this recipe do to the numbers from 1 to 10? Record your answers in a table. • Q3. Can you explain how this recipe is related to the patterns you saw in the table from the Question 1? <p>Think-pair-share activity:</p> <ul style="list-style-type: none"> ○ Comment on each of the following descriptions of the table given below. ○ Do all these descriptions produce the same list of outputs? | |

Statewide IT Bridge Curriculum Contextualized Math Module

| OUTCOMES | CONTENT | ACTIVITIES/RESOURCES | ASSESSMENT |
|----------|---------|---|------------|
| | | <ul style="list-style-type: none"> ○ Are all of these descriptions valid for the table? (<i>HINT: test each one using a list of numbers</i>) <p>Pair up: Each pair takes one description and decides if it produces the same list of outputs.</p> <p>Share: Discuss each group's findings. Decide which, if any, of the descriptions are valid for the Table in Q2.</p> <p>DESCRIPTIONS:</p> <ol style="list-style-type: none"> 1. As the input increases by 1, the output increases by 4. 2. If you add 2 to 1 and double it, you get 6. If you add 3 to 2 and double it, you get 10. If you add 4 to 3 and double it, you get 14. Or, if you add the input to the next input, double that and you get the output. 3. The units' digits are in the sequence 6, 0, 4, 8, 2, so the next number would be 26, then 30, 34, 38, and 42, and then 46, 50, 54, 58, 62, etc. 4. To get the output, multiply the input by 4 and add 2. 5. To get the output, triple the input, then add 2 more than the input. 6. After 6 as an input, the output numbers repeat over again: 6, 10, 14, 18, 22, 26, etc. 7. After 6, the output numbers remain constant: 26, 26, 26, etc. <ul style="list-style-type: none"> • Q4: Which number comes next in this sequence: 1, 2, 3, ___? Find as many different answers and explanations as you can. <p>Activity 4: Reflection activity: Skills for thinking about patterns</p> <ul style="list-style-type: none"> • Take a closer look at the four skills for thinking about patterns. <ol style="list-style-type: none"> 1. <i>Finding patterns</i> involves looking for regular features of a situation that repeats. 2. <i>Describing patterns</i> involves communicating this regularity in words or in a mathematically concise way that other people can understand. 3. <i>Explaining patterns</i> involves thinking about why the pattern continues forever, even down the line in cases you haven't looked at. | |
